

HIGH TENSILE FENCE WIRE

Easy to string and handle, you can save considerable time and money with this low-cost fencing alternative. Suitable for use as a permanent electrical or non-electrical fence. High elasticity and high breaking strength practically eliminate damage done by livestock, falling objects and temperature changes.

Studies show that high-tensile wire fencing is up to 20% cheaper to install than alternative fence systems, is easier to put up, safer for livestock and requires less maintenance.

Meets or exceeds ASTM A-854.
